## **Active Weather Warnings, Watches and Advisories by County:**

- <http://www.wrh.noaa.gov/hazardSummary/?state=ca&bycounty=1>

## **WEATHER SYNOPSIS BY REGION**

### **NORTHERN CALIFORNIA**

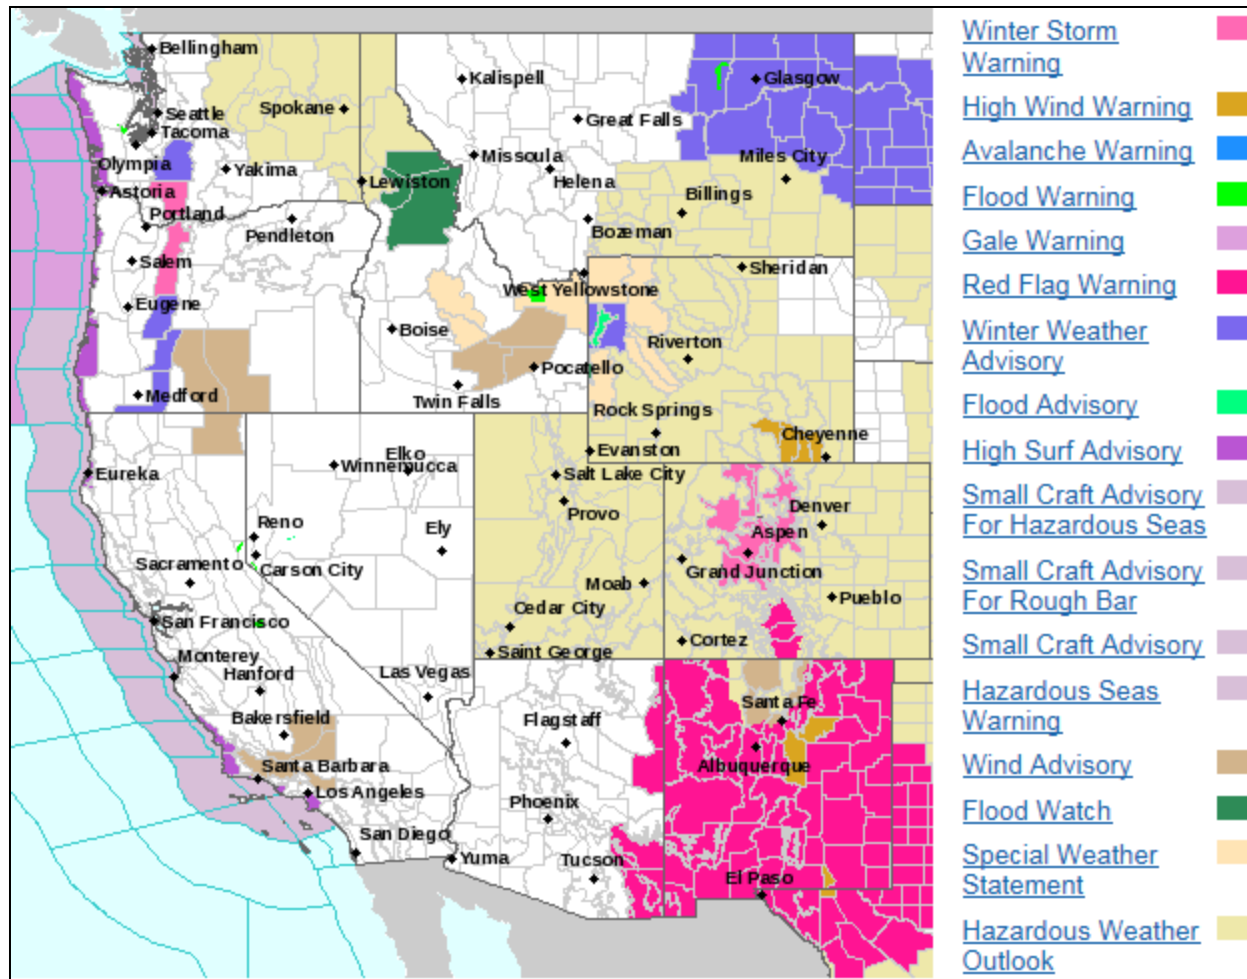

Wet weather will remain through this morning. The next few days will be impactful due to a classic rain on snow event. Afternoon temperatures will be cooler than normal while overnight lows will be warmer than normal. The wind flow will be lighter today.

Ridging, which includes drier and warmer weather, will affect the area later today into tomorrow before breaking down on Tuesday.

### **SOUTHERN CALIFORNIA**

Little or no rainfall is now anticipated across the region with the current storm. The back side of the trough will bring a few degrees of warming and lower minimum humidity to between 20% and 40% today. A ridge of high pressure will build into California from the Pacific Ocean causing temperatures to warm to 10 to 15 degrees above normal and minimum humidity to drop into the teens tomorrow and Tuesday. Temperatures will reach the low 90s over the warmer valley locations early next week. There will be local northeast winds of 10 to 20 mph with gusts to 35 mph over the mountains and below the canyons and passes of the region tomorrow morning.
